

Dustin D. Roten

Ph.D. Candidate | Atmospheric Scientist | STEM Educator

| William Browning Building, 135 S 1460 E, Room 819 | Salt Lake City, UT 84112 | 801-581-6136 |
dustin.roten@utah.edu

Education:

Atmospheric Sciences (Ph.D.)
The University of Utah
Salt Lake City, UT
(In progress)

Engineering Physics (M.S.) & Mathematics (M.A.)
Appalachian State University
Boone, NC
(Fall 2016 – Summer 2018)

Physics & Mathematics (B.S.)
Appalachian State University
Boone, NC
(Fall 2010 – Spring 2015)

Professional Experiences:

Graduate Research Assistant (The University of Utah, Salt Lake City, UT) [Fall 2018 - current]

Responsibilities associated with this role include 20+ weekly hours of research work in the areas of Land-Atmosphere interactions. This work is a part of the Land-Atmosphere Interaction Research (LAIR) group housed in the Department of Atmospheric Sciences at the University of Utah.

Global Change & Sustainability Center Fellow (The University of Utah, Salt Lake City, UT) [Fall 2018 – Spring 2019]

The Global Change & Sustainability Center (GCSC) Fellowship program allows recipients to work with a student-based cohort focused on interdisciplinary graduate training and research around themes of environment and sustainability. Fellows participate in a GCSC seminar series as well as the project-base course “Global Changes and Society” in which an environmental issue in the Salt Lake area is identified and a student-lead solution is constructed and executed.

Graduate Research Assistant (Appalachian State University, Boone, NC) [Fall 2016 – Spring 2018]

Funded by the Graduate Research Associate Mentoring (GRAM) Program, the responsibilities associated with this role include 20+ weekly hours of research work and attending professional development opportunities relating to the responsible conduct of research. Conference presentations and publication submissions to peer-reviewed journals is expected.

Adjunct Physics Instructor (Wilkes Community College, Wilkesboro, NC) [Spring 2016]

Responsibilities included restructuring and instructing a hybrid online/face-to-face Physics I course. This position required instruction in both the lecture and on-campus lab section in which all lab equipment was ordered and maintained.

High School Mathematics Teacher (Ashe County High School, West Jefferson, NC) [Fall 2015 – Spring 2016]

Responsibilities included instructing multiple sections of Math III in addition to a section of Advanced Functions and Modeling. Additional instructional obligations included one-on-one tutoring and attending professional development seminars.

Upward Bound Academic Instructor (Appalachian State University, Boone, NC) [Summers 2016, 2017, 2018]

Funded by the U.S. Department of Education’s TRIO Programs, Upward Bound provides academic support to high school students (who meet certain criteria) to ensure the completion of high school and enrollment in college. Responsibilities included providing targeted preparation in mathematics for students in a classroom setting, structuring curricula, and coordinating STEM based extra-curricular opportunities.

Past Undergraduate Experiences (Appalachian State University, Boone, NC)

Past responsibilities include serving as an undergraduate research assistant with multiple NC Space Grant awards, teaching assistant for multiple Mathematics, Physics, and STEM education courses, supplemental instructor (SI) for multiple Physics courses, and one-on-one tutoring.

Courses Taught:

Secondary: Math III, Advanced Functions and Modeling, familiarity with Math I instruction

Post-Secondary: Conceptual Physics I (instructor of record), familiarity with Calculus I and Linear Algebra instruction

Programming Skills:

R/RStudio, MATLAB (Data Acquisition), C, Assembly, familiarity with parallel processing

Description of Research Interests:

Land-Atmosphere Interactions / Atmospheric CO₂ Dispersion Models / Uncertainties in Gridded Emissions Inventories

Large point sources can account for as much as 60% of emissions for some countries. Therefore, it is important to quantify the spatiotemporal uncertainties for these direct emitters when they are used in developing carbon inventories and climate models. The current focus of this work is to quantify the emissions and the associated uncertainty of these large point sources with as fine a resolution as possible. Current methods include the implementation and automation of the Hybrid Single-Particle Lagrangian Integrated Trajectory (HYSPLIT) model and the application of spatiotemporal metrics to understand the uncertainties introduced from unknown, yet crucial power plant parameters in the context of emissions inventory based atmospheric CO₂ models.

Ion Trapping / Plasma Diagnostics / Ion Chemistry

The reactive and radiative properties of intermediately charged neon ions are of interest to a variety of applications including terrestrial and astronomical plasma diagnostics as well as precision tests of atomic structure theories. In order to study the reactivity, bombarding vapors of interest at nanoTorr pressures with electrons. Ions are stored for several milliseconds and then ejected from the trap into a time-of-flight mass spectroscopy (TOFMS) system.

Professional Roles (Past & Present):

Member: American Geophysical Union, Sigma Pi Sigma

Technology & Engineering Education Collegiate Association (TEECA) National President/President-Elect (2010-2013)

- Special Recognition Award of Outstanding Service as President (Columbus, Ohio; 2013)
- Special Recognition Award of Outstanding Service as President-Elect (Long Beach, California; 2012)

Physics and Astronomy Club President (2013-2014)

Physics and Astronomy Club Vice-President (2012-2013)
